Description

The **Yekan** M21 Panel to DIN-Rail Mount is an innovative solution designed to streamline the installation of transducers, transmitters, and signal conditioners within industrial Junction boxes. It makes switching from the standard 4-screw panel mount to the more convenient DIN-rail mounting system simple.

If you've purchased equipment that came with a 4-screw (panel mount) setup, but you need to install it on a DIN rail inside your control panel, the Yekan M21 is your solution. Our adapter bases allow you to quickly and easily convert your device's mounting style to a DIN-rail compatible one.

The Yekan M21 comes in multiple sizes to fit many different transducers and transmitters from various brands.
